

## **Construction Bulletin 120293MV**

**Date:** December 2, 1993

**Subject:** Template for installing wing strut attach brackets

**Problem:**

It has been discovered that the template for installing the wing strut fittings (W-210) to the main spars is the wrong one. This template in question is Fig 1 of Chapter 4. Following the instructions in the beginning of chapter 4 and using the original figure 1 printed in the manual would place the strut fitting at an incorrect angle.

**Solution:**

Replace the original figure 1 with the revised copy supplied with this package. Then follow the instructions as they are written in Chapter 4, using this new template to position the strut fitting as specified. This will avoid any problems or misalignments when rigging the wings and minimize any misaligned loads in the fitting.
